Subject: water loss audit reporting

Good Morning Andria,

I am looking for clarification to the definition of Urban retail water supplier. It states 3000 end users, Are you talking service connections? Population? San Antonio Water company serves a total population of 3300, a total number of service connections is less than 1400, water produced for domestic use less than 1400 AFT. We want to make sure we fit the criteria you are looking at for us to spend the time and money on this report.

Tommy Hudspeth

Water Utility Superintendent

San Antonio Water Company
